

100 DAYS OF *Swift*

There are 50 Swifty terms hidden in the grid below – can you find them all?

HINTS

1. ~~Fixed size collection of values of any type~~ Tuple
2. ~~A custom type with cases and associated values~~ Enumeration
3. ~~Makes a method shared across all instances of a class or struct~~ Static
4. ~~How we check for and extract the value inside an optional~~ Unwrap
5. ~~Type that stores data as pairs of keys and values~~ Dictionary
6. ~~Places variables into strings easily~~ String Interpolation
7. ~~Loop type commonly used to make infinite loops~~ While
8. ~~A list of criteria that a type must conform to~~ Protocol
9. ~~Evaluates multiple conditions in one block of code~~ Switch
10. ~~Special method that creates instances of structs and classes~~ Initializer
11. ~~Functions that accept one or more parameters of a specific type~~ Variadic
12. ~~Code to handle errors thrown by do~~ Catch
13. ~~Value passed into a function~~ Parameter
14. ~~Unwrapping alternative to if let~~ guard let
15. ~~Sends back a value from a function~~ return
16. ~~A catch all case for switch blocks~~ default
17. ~~An anonymous function that you can pass around as data~~ Closure
18. ~~A whole number~~ Integer
19. Telling Swift the specific type a variable should be Annotation
20. Question marks after optionals Nil Coalescing
21. ~~Code that is triggered when properties change~~ Observer
22. ~~May or may not exist~~ Optional
23. Keyword that lets function parameters be modified outside the function Mutating
24. ~~Access control that restricts a property to being used only inside its type~~ Private
25. ~~Skips the rest of the current loop iteration~~ Continue
26. Loop that always executes at least once Repeat
27. ~~The return type of a function that returns nothing~~ Void
28. How we refer to the current instance of an object unknown
29. ~~Struct initializer that assigns values to all properties~~ Memberwise
30. ~~The name for how values used in a closure are stored for later use~~ Capturing
31. ~~A variable attached to a struct or class~~ Property
32. ~~A type that spans values between two numbers~~ Range
33. Special syntax for final parameter closures Trailing
34. ~~Type that holds a large floating point number~~ Double
35. ~~The name for math symbols like + and~~ Operator
36. ~~The ability to treat an object of one type as another type~~ Typecasting
37. ~~Adds extra functionality to a type~~ Extension
38. ~~The name for a function that exists inside a struct or class~~ Method
39. ~~Exits a loop immediately~~ Break
40. ~~Keyword for a function that can trigger errors~~ Throws
41. ~~Key that lets us replace a method inherited from a superclass~~ Override
42. ~~When one class builds on another~~ Inheritance
43. ~~Reads the length of a string~~ Count
44. ~~Apple's all in one code editing environment~~ XCode
45. ~~Operator that takes three operands~~ Ternary
46. Puts off work until later
47. ~~Name for a method called before class destruction~~ Deinit
48. ~~Ordered collection of values stored in a single value~~ Array
49. ~~A class that cannot be inherited from~~ Final
50. ~~Holds either true or false~~ Boolean
